

RF 2/24/05 290.745USN

PATENT

In the claims:

Claims 1-23. (Canceled)

- 5 24. (Currently amended) An information delivery system
that is connected to communication networks, comprising:
~~an information delivery server comprising:~~
an information receiving module in communication with a
plurality of communication networks, the information receiving
10 module is for receiving a message from a sender in communication
with a first communication network and for converting the message
into a form suited for information processing units in
communication with the information receiving module;
detection means for detecting and distinguishing a key
15 word from requested information in a request of the converted
message;
an information routing module in communication with the
information receiving module, the information routing module
receiving the converted message and directing the converted
20 message to a selected information processing unit based on key
~~data~~ word received from the sender;
the selected information processing unit having a
database with a command list;

RP 2/24/05 290.745USN

PATENT

the selected information processing unit having
searching means for identifying the command list associated with
the key word;

means for downloading the command list from the
5 database;

processing means for performing commands listed in the
downloaded command list associated with the key word;

sending means for sending a reply with results of the
performed commands;

10 ~~the selected information processing unit being adapted~~
~~to process the message based on the key data, fetch information~~
~~requested in the message, handle the fetched information and~~
~~develop a reply to the message;~~

an information sending module in communication with the
15 information processing unit for converting the reply to a form
suited for a receiver of the reply, the receiver being the sender
or the receiver being in communication with a second
communication network;

an user interface in communication with the information
20 delivery server, the user interface having a terminal connected
to the information delivery system for creating and maintaining a
service product in the information delivery system;

the service product adapted for fetching, processing
and storing information, the service product having an operation

RF 2/24/05 290.745USN

PATENT

program presented in a database as a command list of functions to be performed, the command list being associated with the key word data; and

the selected information processing unit being in
5 communication with the database for searching the key data word and downloading the command list associated with the key data word from the database and performing the functions listed in the command list.

10 25. (Previously amended) The information delivery system according to claim 24 wherein the information sending module is in communication with an information control module for receiving an answer therefrom for sending the reply via a sending module to the receiver of the reply.

15 26. (Previously amended) The information delivery system according to claim 24 wherein the information processing unit is in communication with a plurality of networks and is adapted to fetch information requested in the message, from the
20 plurality of networks or data bases stored in the information delivery server.

27. (Previously amended) The information delivery system according to claim 24 wherein the information processing

PATENT

unit is adapted to handle the message and the information requested by means of a service product that has a command list program comprising a list of functions.

5 28. (Original) The information delivery system according to claim 27 wherein the command list program is stored in a database of the information delivery server.

10 29. (Original) The information delivery system according to claim 24 wherein the first communication network is a wireless communication network.

PATENT

RE 2/24/05 290.745USN

30. (Currently amended) A method of delivering information to communication networks, comprising:
- providing a service product for fetching, processing or storing information;
- 5 presenting an operation program of the service product as a first command list and a second command list of functions to be performed;
- associating the first command list with a first key word and the second command list with a second key word;
- 10 storing the first command list and the second command list in a database;
- receiving a first message comprising the first key word from a first communication network;
- identifying the first key word in the first message;
- 15 selecting an information processing unit based on the first key word;
- and searching in the selected information processing unit for the first command lists associated with the first key word;
- finding and retrieving the first command list in the database;
- 20 performing functions of the first command list;
- fetching information requested in the first message;
- preparing a first reply based on the fetched information;
- the first reply to a first form suited for the first communication network when ~~the~~ the first reply is sent to the

PATENT

first communication network and converting the first reply to a second form suited for a second communication network when the first reply is sent to the second communication network; and the first reply to the first communication network or to the
5 second communication network.

31. (Previously amended) The method according to claim 30 wherein the method further comprises fetching information requested in the first messages from a plurality of networks or
10 from a data base stored in the information delivery server.

32. (Previously amended) The method according to claim 31 wherein the method further comprising processing the first messages and fetching the information requested by means of a the
15 service product, including simple functions in a command list program, created in the information delivery system.

33. (Previously amended) The method according to claim 30 wherein the method further comprises storing an information
20 delivery product, comprising the information requested, in a the database.

PATENT

RE 2/24/05 290.745USN

34. (Original) The method according to claim 33 wherein the method further comprises modifying the information delivery product with parameters added to fields of an information delivery product program.

5

35. (Original) The method according to claim 33 wherein the method further comprises describing a function of the information delivery product with a binary program module and transferring the binary program module to an information delivery system.

10

36. (Original) The method according to claim 30 wherein method further comprises describing a function of an information delivery product with a program stored in the first communication network.

15

37. (Original) The method according to claim 30 wherein the method further comprises storing data from a set of information delivery products in an information delivery server.

20

38. (Original) The method according to claim 30 wherein the method further comprises storing data about a user, the data excluding identification data of the user.

PATENT

RF 2/24/05 290.74506N

39. (Previously amended) The method according to claim
30 wherein the method further comprises constructing an
information delivery product to conform to a mediated information
and to prevent access to predetermined data in the first
5 communication network.

40. (Previously amended) The method according to claim
30 wherein the method further comprises delaying the first reply
prior to sending the first reply.
